ULTRASOUND WHOLE ABDOMEN

NAME [redacted] **SEX /F** **R/BY** [redacted] **MS**
DATE- 27 March 2026

LIVER Size Normal IHBR normal
Echotexture homogenous Portal vein normal

GALL BLADDER Size normal Wall thickness 4 mm
Pericholecystic collection absent Lumen echo **free**

C B D Caliber Normal Course smooth

PANCREAS -- Size normal Pancreatic duct
Echotexture normal, homogenous normal

UPPER RETEROPERITONEUM ===
Para aortic lymphadenopathy absent, Aorta and IVC normal

RT. KIDNEY-- Size normal, Corticomedullary differentiation is maintained, **there is Grade I hydronephrosis with PUJ calculus of size 13.2mm seen.** Renal parenchymal thickness is normal. **Multiple calculi of various sizes largest measuring approx. 8.5mm seen in right kidney.**

LT KIDNEY -- Size is normal, Corticomedullary differentiation is maintained, **there is Grade I hydronephrosis with PUJ calculus of size 14mm seen.** Renal parenchymal thickness is normal.

SPLEEN -- Size normal, Echotexture is normal
Splenic vein normal with absent splenic collaterals.

FREE FLUID - Absent, at time of examination.

URINARY BLADDER - Wall thickness 3-4 mm, Content - Echo free.
TAS-
UTERUS - Size is normal 7.5x4.6cms, retro verted/retro flexed homogenous echotexture.
Endometrial thickness normal. no fluid seen in cul-de-sac
B/L Adnexa are clear.

OPINION

1. **B/L Grade I hydronephrosis with PUJ calculus.** ***(ADV-XRAY KUB)***
2. **Right renal calculi.**

Patient Name:	[redacted]	Age /Sex:	29Y/F
Ref. By:	[redacted]	Date:	03/27/2026
Part Scanned	IVP		

INTRA VENOUS PYELOGRAPHY

KUB - Bilateral psoas shadows are normal
B/L renal shadows are normal
Multiple radio opaque shadows seen in right renal with single opacity left renal s/o calculus

IVP done with 80 c.c of contrast (Double Contrast) and film were taken at 5 min, 15 min, 45min with pre and post voiding.

15 -45 min. FILM * Right side nephrogram & pylogram seen. normally with normal right ureter seen

45----Min film Left side nephrogram & pylogram seen. normally with normal left ureter Up to lower end

FULL BLADDER Normal in size, shape and contour.
No calculus seen.
No diverticula are seen.

POST VOID FILM * Post voiding film shows no significant amount of urine.

OPINION:- 1- FINDINGS ARE SUGGESTIVE OF B/L NORMAL EXCERETORY KIDNEY
2-- MULTIPLE CALCULUS LARGEST OF 14 MM SEENIN RIGHT KIDNEY .
3-- LEFT PUJ CALCULUS OF 14 MM SEEN
