CT KUB (PLAIN)

Sequential axial CT images of abdomen involving KUB region were obtained.

Right kidney: 10.6x5.6cm in size. 4mm calculus seen at lower pole. There is 8mm calculus (800HU) in right upper ureter causing mild hydro-uretronephrosis.

Left kidney: 9.2x5.2cm in size. It appears normal in size, shape & attenuation. Left ureter appears non dilated.

Urinary bladder appears normal.

Visualised small & large bowel loops show normal distention & attenuation.

Pelvic viscera appear normal.

No free / loculated fluid collection is seen. No evident abdominal lymphadenopathy is seen.

Bone window images show no gross abnormality.

IMPRESSION:

- **Right upper uretric calculus & Non obstructing renal calculus.**
